Ex: 4 ~~Practical~~ 4.

Aim: To setup and configure a LAN (Local area Network) using a switch and Ethernet Cables in your lab.

What is LAN:

A LAN refers to network that connects devices within a limited area such as office building, School or home. It enables users to share resources, including data, Printers and Internet access. A LAN switches servers such as Primary connecting device.

Set up a lan:

Step 1: Plan and Design an appropriate network topology talking into account network requirements and equipment location.

Step 2: You can take 4 computers, a switch with 8, 16 or 24 ports which is sufficient.

Step 3: Connect your computers to network switch via an Ethernet cable, which is as simple as Plugging one end of Ethernet cable

Step 4: ~~Assign IP address~~ to your PCs

1. Log on to your client computer as Administration or as owner.
2. click network and Internet connection.
3. Right click Local Area connection.

Step 5: Configure a network switch:
① Connect your computer to the switch: To access the switch's web interface, you will need to connect your computer.
② Log in to web interface: Open a web browser and enter the IP address of switch in the address bar. Enter the username and Password to log in.
③ Configure basic settings: once you're logged in, you will be able to configure basic settings for the switch.
④ Assign IP address as: 10.1.1.5, Subnet Mask 255.0.0.0.

Step 6: Check the connectivity b/w switch and other Machine by using ping command in command Prompt for a device.

Step 7: Select a folder -> go to properties -> Click Sharing tab -> Share it with everyone on the same LAN.

Step 8: Try to access the shared folder from other computer of Network.

Result:

Thus the setup and configuration of LAN using Switch and Ethernet cables is done successfully
