OUTPUT

```
=== SLIDING WINDOW PROTOCOL - FLOW CONTROL SIMULATION (Go-Back-N) ===

Enter total number of frames to send   : 8
Enter sender's window size             : 4
Enter frame number to simulate as LOST
(0 to 7, enter -1 for no loss)         : 5

-----------------------------------

Sender Window : [Frame 0 - Frame 3]
Node A -->Sending Frame 0
Node A -->Sending Frame 1
Node A -->Sending Frame 2
Node A -->Sending Frame 3
Node B -->Received Frame 0, sending ACK 0
Node B -->Received Frame 1, sending ACK 1
Node B -->Received Frame 2, sending ACK 2
Node B -->Received Frame 3, sending ACK 3
Node A -->ACK 3 received. Sliding window forward.

-----------------------------------

Sender Window : [Frame 4 - Frame 7]
Node A -->Sending Frame 4
Node A -->Sending Frame 5
      (Frame 5 LOST in transit!)
Node A -->Sending Frame 6
Node A -->Sending Frame 7
Node B -->Frame 5 missing. Discarding out-of-order frames after it.
Node A -->Timeout! Resending window starting from Frame 5.

-----------------------------------

Sender Window : [Frame 4 - Frame 7]
Node A -->Sending Frame 5
Node A -->Sending Frame 6
Node A -->Sending Frame 7
Node B -->Received Frame 4, sending ACK 4
Node B -->Received Frame 5, sending ACK 5
Node B -->Received Frame 6, sending ACK 6

Node B -->Received Frame 7, sending ACK 7
Node A -->ACK 7 received. Sliding window forward.

-----------------------------------

All 8 frames successfully transmitted from Node A to Node B.
```

Result:

The Program to Implement flow control at the Data link layer using sliding window Protocal was successfully written in Python.
